Dan,

Can you provide a paragraph to Nancy with language for inclusion with the mine SW and Sediment data that will be sent to La Plata county? Please review Terry Smith's email below for insight into what language to include in the paragraph.

Nancy,

Here is the approval from HQ to provide the mine dataset to HQ. I will forward the datasets that went to HQ for review shortly. They did not include them in their response.

Dave and Althea:

I have reviewed both data sets, and find no issues that would prevent release of the data.

The surface water samples did have quite a few Cadmium, Arsenic and Manganese samples that exceeded the R8 derived recreational screening values. Interesting to note that there was little difference in results of total metals vs dissolved. I assume this is the case because of the relatively low pH, causing the majority of the metals to be dissolved. There were a few cases in which the dissolved values were slightly higher than the total values, but these were all within analytical variability.

Terry

Terry,

Here is the validated data for the SW and Sed samples that have been collected at the mine.

Ping,

I need the HQ format files that are formatted as the R08 SurfaceWater SummaryTable and the R08 Sediment SummaryTable for all of the locations that Sudha gives you for the mine locations.

I DO NOT need the GKM Validated format.
